

METHOD, SYSTEM, AND ARTICLE OF MANUFACTURE FOR GENERATING  
DEVICE SPECIFIC REQUESTS

5

ABSTRACT

Provided are a method, system and article of manufacture for managing devices,  
wherein in certain embodiments a request implemented via at least one device  
independent class is received. A class hierarchy database is traversed to determine at  
least one device specific class that corresponds to the at least one device independent  
10 class, wherein the class hierarchy database stores a class hierarchy and associations  
between classes. The received request is modified, wherein in the modified request the  
least one device independent class has been translated to the at least one device specific  
class.
